▶ # National Provider Identifier

Version 1.0

▶ National Provider Identifier (NPI)

- GET IT – Typical providers must obtain an NPI from National Plan and Provider Enumeration System (NPPES)

- SHARE IT – Once you have obtained your NPI, you must report it to Provider Enrollment

- USE IT

  - During dual submission (currently in progress), please submit all EDI claims with both your NPI and your Medicaid Provider ID
  - After full NPI implementation (tentatively scheduled for 11/1/2007), all EDI claims must be submitted using your NPI only. Failure to inform the Department of your NPI and to submit your NPI on EDI claims will cause processing delays and / or denials of claims once NPI is fully implemented

▶ National Provider Identifier – Get It

If you provide health care services (medical), you are required to obtain a National Provider Identifier.

- Go to **https://nppes.cms.hhs.gov** and apply online

  or

- Call 800-465-3203

▶ **National Provider Identifier – Get It (cont.)**

- You must register at least one Taxonomy code with NPPES

- If you use Taxonomy codes to distinguish the type of service being provided:

  - It is not necessary to report additional taxonomy codes to NPPES
  - The taxonomy code that identifies a specific service must be associated with the correct Medicaid ID and must be submitted on claims for that service type

- If you obtain multiple NPIs for the different services provided, you must register a different taxonomy code for each separate NPI

▶ National Provider Identifier – Get It (cont.)

In order for your claims to be matched to the correct Medicaid Identifier, Division of Public Health Providers have two options for obtaining and using the National Provider Identifier:

- Obtain different NPIs for each Medicaid ID

  or

- Obtain one NPI and use different taxonomy codes to represent the different services provided (each Medicaid ID should have a unique taxonomy code)

- Claims are matched to the correct Georgia Medicaid ID using:
    - National Provider Identifier
    - Zip code from Address on Claim
    - Tax Identification Number
    - Taxonomy Code
    - Address on Claim
    - Provider Name from Claim

Example Using Multiple National Provider Identifiers
